

## **Pillowball Top Mounts (OPTIONAL)**

### **IMPORTANT NOTICE**

Pillowball mounts, including camber and camber/caster adjustable top mounts, are used to increase handling and steering response. However, compared with rubber top mounts, pillowball top mounts transmit sound more quickly and increase the cabin noise from excessive suspension and road force feedback significantly. This is the characteristic of pillowball, not a manufacturing defect.

Cabin noise due to use of pillowball top mount is inevitable and can take place even on newly installed coilover kits, which makes it very difficult to figure out where noise comes from. Therefore, pillowball top mounts are NOT recommended for daily drive cars.
